

Oakwood Project Update – March 13, 2020

Project work will continue along Oakwood Avenue on Monday, March 16th on the blocks between South Willow Street and Park Place as follows:

The Contractor will be installing underground storm drainage with excavation along the north curb line on the blocks between Walnut Street and Park Place. On or about Tuesday March 17 the excavation will cross South Grove Street and proceed along the north curb line toward Park Place. The work is expected to impact access to driveways on both sides of the street while digging near each driveway. All driveways are expected to be open by the end of the workday.

The Contractor will also continue waterline installation between South Willow Street and Walnut Street and is expected to cross Center Street on Monday March 16. When crossing Center Street one lane of traffic will be maintained with flagmen directing traffic. It is strongly recommended motorists avoid this area while this expected one day operation is being performed and use alternate routes. The installation will then proceed toward Walnut Street.

For properties on the south side of the street, we are anticipating that there will be minor conflicts with the water services on that side of the street. If necessary, the Contractor may need to shut off some water services for a short period of time when directly in front of each house. This is expected to impact residences ON THE SOUTH SIDE OF THE STREET ONLY. Further updates will be provided if necessary via text or email.

Note that stormwater structures and other piping and materials for this project will be delivered at various stages and stored along the project route in the right-of-way. To ensure everyone's safety, all persons, including adults and children, must avoid these material stockpiles. Please contact me at the number listed below if you have any questions. Thank you for your patience and understanding.

The Erie County Division of Sewerage Management has notified the Village of the following work activities:

Visone Construction (a contractor of Erie County Sewers) will be replacing sanitary sewer manhole on North Grove Street at the Tannery Brook Bridge and performing other work at manholes along Oakwood Avenue at Hilliker Court and immediately west of Walnut Street.

There will be no interruption of your sewer service during this work. Private driveways will remain accessible unless you receive an individual notification from Visone Construction. The dates projected for this work are weather dependent and subject to change.
